

SIVV ZA

The TROX SIVV is a grille diffuser designed for VAV systems. This diffuser suits a TROX PE controller, which regulates the airflow and the heating (optional) according to the thermal demand in order to reach and keep the room temperature desired. The airflow is influenced by a motorised OBD behind the grille. Access to the electronic components is from the back and side. They are covered by a slide-in lid. Set point adjustment and display are easily accessible from the front.

For more information on TROX PE Controller see above.
